EuroChem **Croplex**® is a balanced nitrogen-phosphate starter fertilizer for direct application, ideally suited for early growth stages.

Croplex® allows for the direct application of essential crop nutrients without concerns of blend segregation. Sulfur supports optimal nitrogen use and promotes yield and quality gains. **Sulfur in sulfate form** (5 lbs.) satisfies immediate nutrient uptake requirements, while its **elemental form** (5 lbs.) ensures longer-term availability. Liquid micronized elemental sulfur is easily weathered into plant useable form.

Croplex® range offers formulations with **zinc sulfate** (1 lb) and **boron trioxide** ($\frac{1}{3}$ lb). Zinc is involved in the synthesis of many plant growth regulators and enzymes, while boron plays a key role in cell growth processes, sugar transport, and pollen formation. Boron trioxide offers a slower rate of mineralization than sodium borate, making it a more secure choice for sustained late season boron supply, which is especially important for corn and canola.

Distinctive color and uniformity of size and shape ensure consistent and even nutrient distribution. Bulk density of 56 lbs/cu.

ESSENTIAL NUTRIENTS

Nitrogen, phosphate, sulfur, boron, and zinc working together to grow more

PROMOTES OPTIMAL NITROGEN USAGE

Sulfate and elemental forms of sulfur ensure rapid uptake and longer-term availability of nitrogen

SAFE STORAGE AND HANDLING

A crush strength 8-9 lbs higher than its market alternatives ensures better product consistency during transportation, handling and application

CONSISTENT APPLICATION

Homogenous sized granules ensure consistent and even nutrient distribution

VISIBLE QUALITY

Distinctive color and uniformity of size and shape
