38-0-0 (+S7.5)

Perfectly balanced nitrogen and sulfur in one granule

EuroChem **stimulus** granulated mineral fertilizer combines the strength of nitrogen and sulfur to give your crops a double advantage.

Crops need nitrogen and sulfur to develop, but sulfur balances in agricultural fields are reducing. A sulfur-enriched nutrition allows farmers to improve nitrogen use efficiency and promote yield and quality gains.

The presence of nitrogen in both highly-effective ammonium and ureic forms ensures N supply while the sulfate-sulfur supports optimal nitrogen use at every stage of growth. With 5:1 and 7:1 ratios available, **stimulus** provides maximum nutrient uptake efficiency and minimal losses.

The combination of nutrients in one granule provides for a smooth and consistent application of vital plant nutrition without unnecessary fieldwork.

stimulus is available in two formulations, making it a universal choice for most conventional crops with a high nitrogen and sulfur demand.

EASY APPLICATION & EVEN DISTRIBUTION

Homogenous hard granules (95% between 2–5 mm)

NO NUTRIENT SEGREGATION

Both nutrients in one granule

READILY AVAILABLE SULFUR

Sulfate-sulfur form ensures full utilization by plants

GROWTH SUPPORT AT ALL STAGES

Sulfur encourages the utilization of nitrogen for fast uptake and optimal development

UNIVERSAL RATIO

Increases yield and quality by promoting more efficient plant nutrient uptake

GUARANTEED PRODUCT QUALITY & CONSISTENCY

Produced from our own high-quality resources
