EuroChem **suNKiss** fertilizer combines the efficiency of nitrogen with a supply of readily available potassium. Nitrogen is present in both ammonia and nitrate forms, ensuring fast, stable and effective plant uptake, while Potassium is totally soluble and fully absorbed by plants.

suNKiss is especially engineered for periods of rapid plant growth and development. **suNKiss** has been rigorously tested over the years in the most challenging environments and has proven efficiency in temperate and subtropical climates, as well as in cooler soil conditions. It is a surface-applied fertilizer which is also suitable for blending.

The EuroChem **suNKiss** range currently consists of three formulas, entirely produced from our own high-quality resources and assets, backed by our dedicated teams of local experts and our global network of innovation and experience.

suNKiss – a simple and efficient solution to support your crop growth and enhance yields.

SCIENTIFICALLY BALANCED
FOR YOUR CROP

Fast-acting nitrogen and water-soluble potassium

CONSISTENT SPREADING
AND IDEAL FOR BLENDING

Homogeneous hard pink granules (90% between 1–5 mm)

GUARANTEED PRODUCT
QUALITY & CONSISTENCY

Produced from our own high-quality resources

NO NUTRIENT SEGREGATION

All nutrients in one granule

AS EFFICIENT
IN COLDER CONDITIONS

Ensured nitrate nitrogen availability even in cooler soil conditions

NO WORRIES
WITH OFFICIAL RESTRICTIONS

P content is minimized or absent

SAFE STORAGE
AND TRANSPORT

Non-oxidizing, non-combustible and explosion-proof.
Increased granule strength vs AN
